

The Fund is a Portfolio Investment Entity (PIE) that seeks to provide investors with long-term capital growth and income by directly investing in equities on a global basis, while at the same time adhering to a “Margin of Safety” investment philosophy. The strategy of the Value Fund is to primarily invest in equity securities trading at a discount in relation to their net asset value/intrinsic value*, with low debt levels**, and which have a consistent history of paying dividends and/or returning capital to shareholders.

* Net Asset Value / Intrinsic Value – is also referred to as “Private Market Value”. Collectively we define them as the value an informed industrialist/acquirer would pay to purchase assets with similar characteristics. We measure Net Asset Value / Intrinsic Value or Private Market Value by scrutinising on and off balance sheet assets, liabilities and free cash flow. We also examine valuations and transactions in the public domain to formulate our view of possible future value.

** Low Debt Levels – can be assessed relative to tangible and/or intangible assets, free cash flow, the industry in which a company operates, or versus peers within an industry.

Total Expense Ratio Definition: Total Expense Ratio (TER) expresses the expense ratio for a fund or unit of a fund against the average NAV (of the fund or unit respectively) over a given period in the past. The TER should reflect the past record, and should not be an estimate for the present or future. In other words, the TER is the annual percentage reduction in investor returns that would result from operating costs if markets were to remain flat and the fund's portfolio were to be held and not traded during a period.
